Gillie's Reduction of Zygomaticomaxillary Complex (ZMC) Fracture

Author: Jayant K. Watve, Professor and Head, Dept of E.N.T. Rajarshi Chhatrapati Shahu Maharaj Govt. Medical College (RCSMGMC) Kolhapur, India.

Abstract: The author reports 15 cases of maxillary complex fractures which were treated in the Indian subcontinent. Thirteen cases were stable after reduction with a Gillie's approach without fixation and obtained a good cosmetic result. In two patients, the fracture was unstable and required an open reduction with stabilization.
